

DCM OLEGA[®] COMPLEX NPK 6-3-4 + trace elements + seaweed extract

Characteristics

- **foliar fertiliser** NPK 6-3-4 with trace elements and seaweed extract
- trace elements: boron (0,25 % B), copper (0,15 % Cu-EDTA), iron (0,3 % Fe-DTPA), manganese (0,3 % Mn-EDTA), molybdenum (0,05 % Mo), zinc (0,4 % Zn-EDTA)
- guaranteed content of seaweed extract: 6 %
- good uptake for a quick greening response
 - urea = an easily taken up nitrogen source through the leaf texture + synergetic action uptake of other nutrients e.g. iron (Fe)
 - chelated trace elements: permanently soluble, easily taken up and provide a good translocation in the plant
- growth stimulant and stronger plants
- prevents and remedies symptoms of deficiency (growth adjustments)
- various macro- and trace elements: solve symptoms of deficiency which often occur together with other deficiencies + balanced proportion in order to avoid antagonistic effects
- quicker uptake than soil fertilization and irrespective of soil conditions (pH, soil temperature)
- easily applicable

Technical description

Suspension of compound fertiliser NPK 6-3-4 with trace elements and seaweed extract (6 %); containing 6 % ureic nitrogen and 0,25 % boron (B); 0,15 % copper (Cu-EDTA); 0,3 % iron (Fe-DTPA); 0,3 % manganese (Mn-EDTA); 0,05 % molybdenum (Mo); 0,4 % zinc (Zn-DTA)

Packaging

in 5 L drums – 4 drums/packaging (= 20 L)

Form

suspension - liquid

Storage

Store in a frost-free place
Keep away from children

Instructions for use

APPLICATION ADVICE

- to be used in the active growing season (spring – summer), as soon as the plants are well in leaf
- apply preferably in the late afternoon or early evening, out of the sun, on slightly moist plants
- shake the bottle well before use
- make the correct dilution and spray evenly over the leaves until it drips down from the plants
- minimum 2, preferably 3 applications, each time with an interval of 10 days

DOSAGE

The exact dosage depends on the needs of the crop, the time of application, the nutritional reserve in the soil and the intensity of sprinkling.

- green, non-blooming shrubs, hedges, conifers..... 8 ml/L water
- blooming shrubs and ornamental plants
 - before opening of the buds* 8 ml/L water
 - in full bloom* 3 ml/L water
- vegetable growing and ornamental plant cultivation under glass 5 ml/L water
- lawns and sports fields..... 30 - 40 ml/L water
atomize 10 L of the solution over 100 m²

REMARKS

- a foliar fertiliser is to be used supplementary to soil fertilization, not as a substitute
- effect and quickness of response are dependent on the plant and the variety
